

22 COMMANDS. NO KEYBOARD.

Stop reaching for the mouse. **Say it, and it answers out loud.**

VOICE COMMANDS 22

"start 45 minutes"

"pause"

"resume"

"add ten minutes"

"log a distraction"

"how am I doing"

"finish"

... and fifteen more

Ask "how am I doing" mid-session and it tells you. Eyes stay on the book.

Time focused, times you looked away, distractions logged — read back to you out loud. One click to allow the microphone, and after that **nothing needs touching.**

AT THE END IT INTERVIEWS YOU

"That felt rough, I kept checking my phone."

↪ Recorded, transcribed and filed. Zero clicks, start to finish.

The session ends, it reads your score back, starts your reflection recording on its own, and asks how it felt. The permission is remembered, so next visit it arms itself.

● One-minute voice journal

Speak for sixty seconds when a session ends. Weeks later, read exactly why that Tuesday fell apart.

● Full-screen focus

The moment a session starts the whole interface disappears. The listening bar stays — that is precisely when you don't want a keyboard.

● Session Autopsy

Planned versus actual, tab leaves, time lost, and a focus score out of 100. It tells you what happened, not that time is up.

● Focus Duel

One link, no account. Both timers start the same second. Highest focus score takes it — You vs Aisha, 4–2.

No account — No sign-up, no email. Open the link and it works.

No server — Your data never leaves your computer. One button erases everything.

No install — It's a web page. Free, instant, nothing to download.

START YOUR FIRST SESSION.
